Thank you!

Please submit any photographs (hi res, 5 megapixels or above) and/or videos you have of the installed products. “Before” and “After” photos are great to have, too!

QMotion Photo and Video Release

By submitting photographs, images, videos or other media (hereafter “images”), I hereby acknowledge and grant QMotion the irrevocable and unrestricted right to use and publish the submitted images in any print, electronic, digital or other media; and to alter the same without restriction. I confirm that I am the owner and that I have or have been granted the authority to bind any and all individuals depicted in the images to these terms. By submitting the images, I and any other individual depicted in the images waive all claims to compensation for use of the images, and/or any rights with respect to such use under copyright law, the right to publicity, the right to privacy, defamation, and any other common law or statutory claim under the laws of any jurisdiction. I hereby release QMotion and its legal representatives and assigns from all claims and liabilities relating to said images.

Tips for high quality photos:

- ✓ Think about lighting. Pay attention to how much light you have and its direction. Too much light behind an object can darken it in photos (i.e., light coming through the window). A simple way to avoid this would be to photograph the products in the morning or evening; *stay away from sunny, mid-day shots.*
- ✓ Adjust Exposure Compensation. If a photo is too light or too dark, you can look through the scene modules available on your camera, or you can adjust the exposure compensation yourself. Many cameras have a button for this identified by the +/- symbol. If your photo is too dark, move the scale up above zero; if it is too light, do the opposite. Bracket shots to compensate for bright exterior light.
