

Have it both ways.

Allow just the amount of light you want. QMotion®'s dual shade bracket system lets you choose to install a combination of two shades on the same window. With the dual shade convenient bracketing system, you can select a light filtering decorative fabric in the front with a room darkening fabric closest to the glass. And you can control them independently of one another.

- Choose light filtering screen or decorative fabric for the front shade to admit the amount of light you want or to allow a clearer view outside if you prefer.
- Use a blackout fabric for the back shade to maximize light blocking and privacy.
- Control front and back shades separately with the QMotion® Multichannel Remote for precisely the positioning that suits you.
- Fascias available to enhance the appearance, conceal the shade system, and add to the light management capabilities.
- Manual shade features available on all shades for tighter budgets or where automation is not desired.
- Available in low voltage or battery operated depending on preference and budget.
- Special bracket design allows for easy installation even in windows with a small amount of depth.

QMotion®'s dual shade bracket system provides flexibility in light management and control, style, and choice. So if it seems a bit like having your cake and eating it too...well, enjoy.

With a room darkening shade and a light filtering shade in the same window, there is no need to compromise on design or function.
