Power Spring Counterbalance Replacement Instructions

These instructions are for the removal and replacement of the Power Spring Counterbalance replacement for a roller shade. Read and understand all instructions prior to installation. Wear safety glasses and gloves at all times when working with shades.

Step 1
Take the shade out of the window brackets.

Step 2
Make sure you select the spring end. The motor end has more plastic and a ring that is prominent running the exterior. The spring side has a larger opening at the center nearest to the spindle.

Step 3
Cut the two safety sticker tabs on the spring end label.

Step 4
Pull the Power Spring Counterbalance Assembly out of the shade tube.

Step 5
Make sure you have the correct power spring assembly. Standard direction will have orange o-rings on both top and bottom. Reverse will have no o-ring on the bottom part of the assembly.

Step 6
Insert the Power Spring Counterbalance Assembly as shown below. Be sure the Power Spring slots are aligned with the slots in the shade tube. (Caution: Do not twist the spring assembly as you are installing it.)

Step 7
Re-install the shade into the window brackets.

### Roll Orientation Grid
Based on your shade set-up, this grid will let you know which spring you should use.

<table>
<thead>
<tr>
<th></th>
<th>Standard Roll</th>
<th>Reverse Roll</th>
