

ZIGBEE SHADES IN QUBE APP

All shade IDs and locations are still saved on the Qube. The name of each shade and the location it belonged to will be lost. You will need to be on-site in order to re-name the shades in the app and set them back to their locations.

Here are the steps to follow:

1. Open the Qube App
2. Click on “Add Devices”
3. A list of all shades will then appear by device type
 - a. Tap on a shade to cause it to jog
 - b. Name the shade
 - c. Assign the shade to an existing location
 - d. Repeat steps a-c for all shades on the list
4. If a shade failed to populate on the list, please reference page 3 [here](#) to manually remove a shade and then re-add the shade through the app
5. System should be re-configured and ready to operate
